CAPS XL: Setting a new standard in Inhouse Communications

Tremendous business opportunities will be offered by multi-media systems. To convert these opportunities into working systems, the industry needs tools which enable creative persons to put their ideas to work reliably and without unnecessary fuss. Our product, CAPS XL, is one of those products.

CAPS XL offers a multi-user environment in which several people, working on IBM-compatible machines, Apple Macintoshes and Commodore Amigas can cooperate in setting up colorful, professional presentations, which may be run on public cable TV systems or inhouse video networks. Presentations or newsflashes can be sent to a remote Amiga without interrupting the running show.
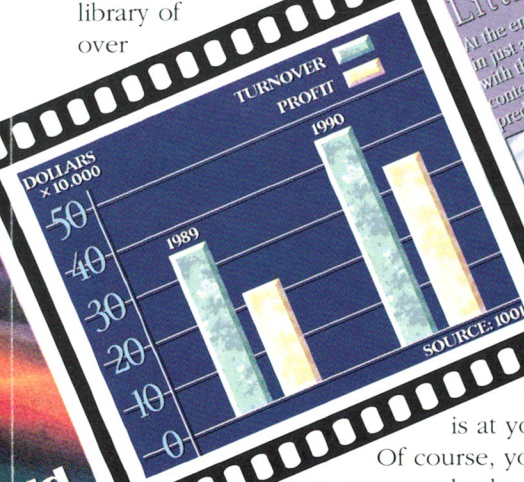

The signals for the video network are generated by an Amiga computer. It contains a script specifying which pictures, animations or text screens are to be shown, in what order and for how long (or at what moment in time). The script also contains instructions for the way one picture is followed by another (fade in, fade out, various wipes etc.).

CAPS XL is unique in the way it handles editing shows at remote locations (also on character oriented workstations). Pictures can be downloaded from and uploaded to the Amiga feeding the network, to enable editing of existing screen images and adding new ones.

CAPS XL can be used in different modes: the novice is guided by the integrated Help Facility, whereas the experienced user can make steps as big as he or she likes.

Standard CAPS XL contains a full-fledged word processor, a window definition tool, a typeface control panel, an elaborate palette tool and an easy-to-use cut and paste menu for pictures. Pictures can be used as a background for text, remapped to different colors or recalculated to fewer colors.

To speed up your work and still achieve accurate and professional looking presentations, a library of over 50 style sheets is at your disposal. Of course, you can add your own style sheets to the library (or adapt ours).

Compiling shows and editing active presentations 'on the fly' is a tricky business....unless precautions are taken. CAPS XL contains various facilities which protect your valuable pictures, texts and scripts.

Features

Script and presentation Repository
Page Lay-out System
Object oriented script editor
Multi-user communications via modem or wire
Electronic mail
Over 50 transitions available
Animations
Remote access with all popular systems
Optional VCR control module
