Dear Erik ,

at first thanks for your letter and excuse my bad school-english.
I am a 21 years old Music-composer/programmer, and i try to make
music look like my idol jean-michel jarre. At the beginning i have programmed
only sounds. But now I make a mix between melody and sound. It is not easy.
I dont using 'THE MUSIC SYSTEM'. I cant make enough sound with this program.
So i have write my own. It is called Speedi System . I can make Music with
a minimum of 4 (!) blocks. But that will be just a short music. I cant tell
you how you can rip out the musicroutine and USR-files. I cannot play Key-
board or any other instrument. I make the music for my ear.
You asked what my music costs ? I think i will take 150-200 DM for one Music.
But for this you must tell me, where the music can lie. You cant put my music
in a other memory-page self. On this disk are my newest tunes. I think , it
is better for a game, when you use a pop-sound like in my Dance Sample I.
My musicroutine is using the IRQ. The IRQ will be changed on #28 (Hex) in the
adress $DC05. It is using the Zeropage adresses $bb/bc $fc/fd $fe/ff,$03fe/ff
$03FC/FD. I change the IRQ, because the sound is better, when i change him
faster.
I hope you have unterstand my letter. And i hope of course to hear from you
soon. I like to make music for you, because its my hobby to program this.

Yours sincerely

Michael Winterberg
